EXECUTIVE SUMMARY

CUSTOMER CHURN & RETENTION STRATEGY

This Week 8 capstone analyzes 500 customer records to identify churn-associated patterns and translate them into a practical retention workflow. The overall churn rate is nan%.

KEY FINDINGS

• Retained customers average nan months of tenure; churned customers average nan months.

• Retained customers average $nan in monthly charges; churned customers average $nan.

• Contract type shows materially different observed churn rates across segments.

BUSINESS ACTIONS

1. Strengthen onboarding and engagement during the early customer lifecycle.

2. Segment retention activity by contract type.

3. Use the baseline churn model to prioritize human review rather than automate customer decisions.

4. Measure churn reduction, retention uplift, response rate and intervention cost through controlled experiments.

LIMITATIONS

The dataset does not contain revenue, profit, acquisition cost, campaign spend or intervention-history fields. Therefore, ROI cannot be calculated from the supplied data.
